1.0 Introduction

1.1Purpose

This document specifies the requirements for the Guidance Hub project. It outlines functional and non-functional specifications, use cases, and system details to ensure successful implementation.

1.2Scope of Project

The project involves developing a mentorship platform that connects mentors and mentees, enabling personalized guidance across various fields. The platform will feature mentor profiles, search functionality, communication features, and an admin panel for system oversight for admin only

1.3Intended Audience

- Students
- Companies and Organizations
- Various Industry (IT, AI etc)
- Working Professionals
- Entrepreneurs and Founders

1.4Glossary

Mentor	An experienced individual which give guidance to mentees
Mentee	A user which come for guidance
One to one session	Mentor give session to mentee
Chatting	Mentee can chat with mentor
Search	Mentee can search and find the mentor according to their skill set

1.6 Overview of Project

The Guidance Hub project aims to create a dynamic platform that connects mentees who want guidance with experienced mentors from various industries. The platform facilitates tailored one-on-one mentoring sessions, enabling mentees to gain valuable insights, improve skills, and achieve their career goals. With features like mentor-mentee matching, session scheduling, feedback systems, Guidance Hub provides a seamless and flexible experience for users. It can gather a wide audience, including students, professionals and entrepreneurs and empowering individuals to unlock their potential through mentorship

2.0 Overall Description

2.1 System Environment

- Frontend: Next.JS for building an interactive and responsive user interface.
- Backend: Node.js for API development and server logic and to communicate with Database.
- Database: MongoDB for data management.

2.2 Product Perspective

The product perspective of Guidance Hub, it is a user-centric platform designed to bridge the gap between aspiring professionals and seasoned experts. It serves as a digital ecosystem that streamlines the mentorship process, offering tools like intelligent mentor-mentee matching, real-time scheduling, and progress tracking. The platform is capable of integrating additional features like analytics, personalized recommendations and resource sharing. This perspective highlights Guidance Hub as a web product that supports skill development, career advancement, and lifelong learning in a structured yet flexible manner.

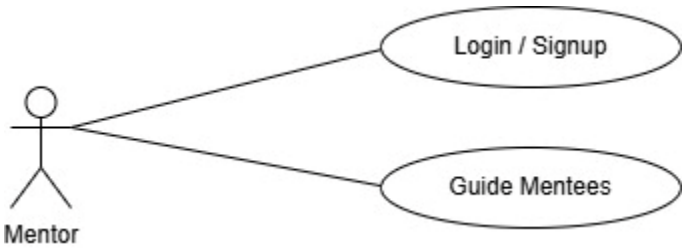

2.3 External Interface Requirements

- APIs: Integration with third-party APIs for real-time communication and scheduling.
- User Interface: Responsive design compatible with desktop and mobile devices.

3.0 Detailed Functional Requirements

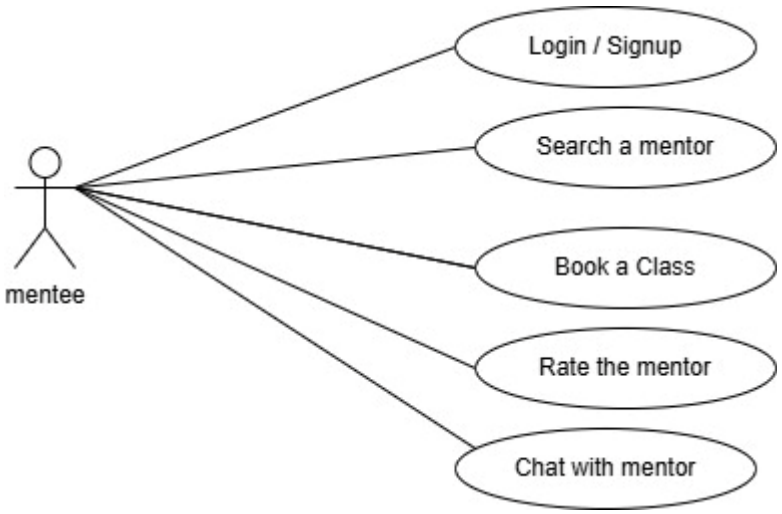

These requirements detail how the platform operates for mentors, mentees, and administrators.

- 3.1For Mentors

Description: - A Mentor can make account by sign up and can login and can guide mentee whoever what guidance from Mentor

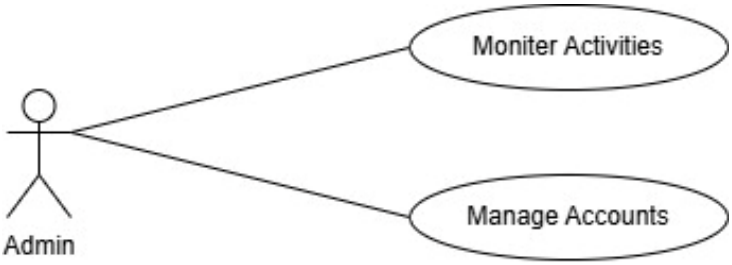

- 3.2For Mentee

Description: - A mentee can sign in or login and search and browse mentors by expertise, industry, pricing, and availability, Book one-on-one or group sessions with mentors, View session schedule, send pre-session questions or messages to mentors View mentor pricing details, Rate and review mentors after sessions, provide feedback on session quality to help others make informed choices

- 3.3For Administrator

Description: - Monitor mentee and mentor accounts for maintaining discipline, Suspend or deactivate accounts in cases of policy violations. Review feedback, reviews, and session comments to ensure appropriate behaviour

3.4 File Sharing

- Mentors can share important resources such as files, PDFs, or presentations with their mentees during or after a session.
- This feature enables smooth communication and knowledge transfer, ensuring that mentees have access to study materials, assignments, or reference documents provided by the mentor.

3.5 Payment Gateway

- Mentees can securely pay the mentor's session fees through an integrated payment gateway.
- Multiple payment methods are supported, including credit/debit cards, UPI, net banking, and wallets.

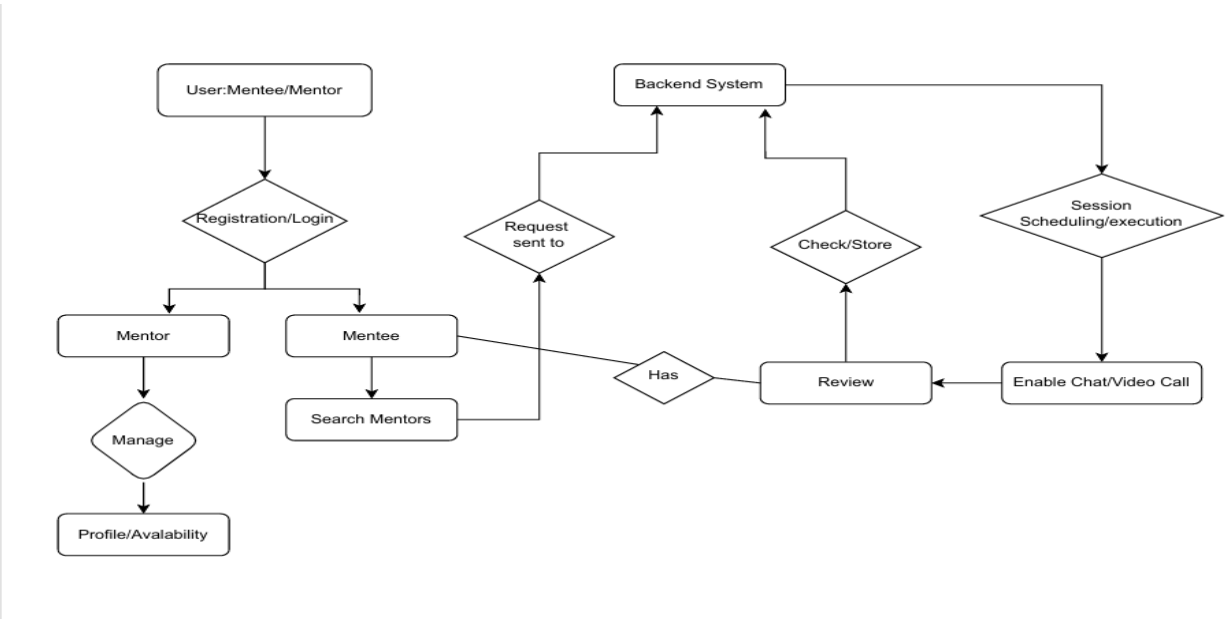

4.0 Detailed Non-Functional Requirements

4.1 Logical Structure

The system should adhere to modular design principles, separating UI, business logic, and data layers. Code must be maintainable and scalable.

Mentorship System Flowchart Description:

This flowchart represents the process of a mentorship system, showing how mentees connect with mentors and schedule sessions.

1. User Registration/Login
    - Users (mentors or mentees) must first register or log in to access the platform.
2. Mentor Actions
    - Mentors manage their profiles, including availability and expertise.
3. Mentee Actions
    - Mentees can search for available mentors based on their needs.
    - Once a suitable mentor is found, a request is sent to the system.

4. Backend System Processing
    - The system receives and processes the request.
    - It checks and stores the information in the database.
    - The request is reviewed to determine if the mentee has a match.
5. Session Scheduling & Communication
    - If the request is successful, a session is scheduled.
    - The platform enables communication through chat or video calls for the session.

4.2 Security

- Data encryption for sensitive information.
- Role-based access control to manage user permissions.

5.0 Detailed Use Case Diagram

The use case diagram provides a visual representation of the interactions between actors. Key actors include:

- Mentors
- Mentees
- Administrators
- System
